Meta Dollar Coin (MDC Coin) WHITEPAPER

www.mdccoin.io

Proposal drafted by community for Meta Dollar Coin Blockchain Development

MDC Coin Blockchain Crypto Network

MDC Coin Blockchain Crypto Network - MDC is a fast, scalable and low fee Blockchain Ecosystem, designed to support businesses with friendly blockchain solutions.

Our goal is to bridge offline to online, and web2 to web3 to prepare the world for a new fully tokenized reality. MDC Coin Blockchain's protocol provides the user with an easy-to-use interface that is best-in-class, allowing onboard companies, DApps, DAOs, investors, and service providers into the same ecosystem.

MDC Coin Blockchain's decentralized management system opens new opportunities for funding, governance, measuring performance, and managing treasuries.

Disclaimer

MDC Coin Blockchain Crypto Network does not accept any obligation to provide recipients with any additional information, or to update, expand, revise and/or amend the information herein, or to correct any inaccuracies which may become apparent.

Although all information and views expressed herein are provided in good faith, estimates and assumptions made by MDC Coin Blockchain Crypto Network's team, make no representation or warranty (expressed or implied) as to the accuracy or completeness of the information herein, and no assurance is provided that actual results will be consistent with the descriptions and projections herein.

This document is not a prospectus and does not constitute or form any part of any offer or invitation to subscribe for, underwrite or purchase the "MDC" utility coin or, nor shall it form the basis of, or be relied upon, in any way, in connection with any decision relating to the utility coin "MDC" issued by MDC Coin Blockchain Crypto Network Mainnet Blockchain.

MDC Coin Blockchain Crypto Network Mainnet Blockchain's short name is MDC Coin Blockchain or ABC Network Mainnet Blockchain or MDC Mainnet Blockchain.

The "MDC" utility coin is needed to be able to use the web3 and decentralized application (dApps) as this document explains. MDC Coin Blockchain Crypto Network will perform the sale and transfer of the "**MDC**" utility coin.

Table of Contents

Our Values

● **Autonomy**

MDC Coin Blockchain's Infrastructure provides the technical infrastructure for companies to operate in a Web3 environment and create their STOs as a form of funding. It allows any business from any walk of life to move from ambition to action and succeed in realizing their projects.

● **Simplicity**

MDC Coin Blockchain's dApps is being built to emphasize simplicity, to make the tokenization process as simple and accessible as possible.

● **Compliance**

MDC Coin Blockchain will help companies transform their assets such as shares into tokens, and issue their own STOs as per the applicable legislation in their host State, whilst complying with the local regulation regarding the issuance of securities and asset management. The same infrastructure will provide DAOs with the needed tools to operate and be managed.

● **Democracy**

MDC Coin Blockchain paves the way to open illiquid markets to the world, creating a solution to democratize fundraising and bridge the gap between legacy finance, retail investing and the decentralized Crypto verse resulting in new investment opportunities.

Introduction

MDC Coin Blockchain is a resurgence project with its in-house community of professional developers, team of experts, and user base. This project showcases the best possible team of people having hands on experience of blockchain tech, NFTs, web3 space, and other emerging entities. As the MDC Ecosystem continues to evolve and mature, we will soon see and use new innovative use cases exploring a more decentralized, secure, and transparent interest in the industry.

This project is suitable for developers and business-focused traders to make a deal on the most approaching method. MDC grants access to this blockchain platform which is a fast, scalable, and POA-operating application.

Meta Dollar Coin can send between blocks, can be integrated into many projects and can be mined thanks to mobile applications. Unlike many projects, Meta Dollar Coin real protects the investment made thanks to the projects.

With Meta Dollar Coin Football Club and many more projects, it continues to develop with its community of more than 2 million.

Meta Dollar Coin wants to create many projects with real workforce and to work on creating products and brands with the name of Meta Dollar Coin in these companies. These products will bear the name Meta Dollar Coin and can be purchased using Meta Dollar Coin. Thanks to these projects, Meta Dollar Coin will not be open to manipulation on exchanges and can be used safely.

The Token is free and provided by the Meta Dollar Coin in our fight against self employment for Nigeria, Nigeria Permanent Residents and Long Term Pass Holders residing in Nigeria. For Short-Term Visitors, kindly refer here for further information.

When a token has expired or has been revoked, it can no longer be used to authenticate Git and API requests. It is not possible to restore an expired or revoked token, you or the application will need to create a new token. This article explains the possible reasons your GitHub token might be revoked or expire.

SUPPORTED BY THE GLOBAL #LUNATIC COMMUNITY. JOIN A DIVERSE, RAPIDLY GROWING WEB3 ECOSYSTEM WITH PROJECTS ACROSS DEFI, GAMING, AND NFTS.

Our web3 development services include immersive metaverse applications across diverse industries. From gaming and entertainment, education, fashion, and social media, to finance and real estate, we can guide any business in its metaverse development journey.

Purpose

Our team of experts has lined up the development of some exceptional, user-centered, as well as market-oriented blockchain products that will make your experience hassle-free and worth capitalizing:-

1. Blockchain Development

MDC Blockchain is a recently released cutting-edge blockchain network that effectively operates using the Geth software's Clique Proof of Authority consensus algorithm. This application is proposed to deliver the fastest transactions focused on the core development and anticipation of MDC tokens offering lower energy consumption. Similar to Ethereum and Binance, we believe that MDC Coin Blockchain Crypto Network is now able to run a smart contract independently, as its open-source modeling enables developers to create and run unlimited contracts.

2. Web3 Products Development

Our project also incorporates several ways to introduce the best web3 products and solutions working on the native asset MDC for seamless transactions and exploring the metaverse panel.

Check out some planned product use cases:

● **NFT Marketplace** - An NFT Marketplace is under-progress, which will focus on the NFTs deployed on MDC Coin Blockchain, which will upgrade to be available in other networks soon. This panel is meant to create and showcase some good NFT collections, including Lands, Avatars and many more. A member can also use the NFT Launchpad (List NFT hot and trending projects), NFT real estate, as well as NFT Multi-chain smart contracts to make the right decision about planned investments.

● **Decentralized Chat and Games** - A decentralized application will be released having all prospects of decentralized messaging giving access to common users who use the app without any network failure or interruptions and offering a safe place for conversation and seminars. Member will be soon allowed access to the gaming portal to be released with some of the most demanded games for gamers and to earn the native coin.

● **Browsers and Explorer** - This application will be a dedicated explorer of MDC coins, the same as Ether scan or BSC scan, where users can easily track all the transactions of MDC coins and contracts.
3. Wallets and Exchange

At MDC Network, we develop DeFi applications focusing on multiple areas of interest. Looking at the decentralized financing industry crossing the bar of $15 billion, where ABC DeFi portal will enable you to explore, embrace and implement various DApps such as Decentralized exchange, crowd funding, yield farming, and smart contract audit services to give you an authorized project to trust on.

● **Crypto wallet** - We are working on a non-custodial crypto wallet that will help one to store, send, and receive MDC coins or other assets developed on MDC Coin Blockchain. We are adding the multi-chain features for other networks such as Ethereum, Binance, and Solana as well.

Our Blockchain Architecture

We are happy to introduce an extremely new project developed with a super easy interface, Launchpad, effectively explainable use cases, and scalable quite transparent what current investors or developers crave for. This Web3 project is a blockchain project that promises to serve valid, demanding, and exclusive decentralized applications for users having zero knowledge about the tech or domain.

MDC Blockchain denoted as MDC Coin Blockchain Crypto Network works on a cutting-edge smart contract and potential network of the Geth software's Clique Proof of Authority (PoA) consensus mechanism. The team has perfectly laid out mostly used token standards to address the scalability, security, transparency, and decentralization challenges existing in current ecosystem and traditional blockchain systems.

The team of developers leverages the potential of PoA protocols to make MDC Blockchain stand out of the crowd delivering an efficient and reliable environment. This platform is initiated for both the developers as well as in-house experts to explore the sights of decentralized applications (DApps) eventually deployed on MDC Network. Currently, you will find a verified terms of the GNU license of MDC Blockchain which stays upright to its reputation.

Hence, you can use this potent blockchain network to develop, create and portray your interest and skillset for future prospect. Let us mention some details about our token standards, specifications, product use case and smart contract supporting blockchain.

ABC Network Main Net

The ABC Network Main Net is comparatively fast, scalable, and transparent network having a record to work within 3 second average block time. The team has carefully released a sophisticated native asset named MDC coin for overall ecosystem housing a Tokenomics around 21,000,000 MDC Coin supply. Moreover, this blockchain supports MDC-20, MDC-721, and MDC-1155 token standards to offer the majority facets to the user base making a loud host to begin with.

Check out the smart contracts contribution that has been introduced in support of MDC Blockchain. MDC Coin Blockchain for Crypto Network is a technical standard which can be used to initiate assets, hence, implement smart contracts on the independently launched blockchain network. You will find many MDC standards that define various functionalities/features precisely for tokens and contracts.

MDC-20: This standard represents the basic functionality defined for fungible tokens on the MDC Network that are the commonest type of assets used in diverse decentralized applications, exchanges, as well as token sales.

MDC-721: This standard defines and supports the concept of NFTs unlike MDC-20 tokens; the assets supporting this standard are unique and indivisible. Such tokens define their ownership of a particular digital item. Since, 2020, the non-fungible tokens have gained significant fame and reputation in the art and gaming industries.

MDC-1155: This standard is a combination of the aspects of both MDC-20 and MDC- 721 token standards while enabling the initiation of fungible as well as non-fungible assets within a single smart contract. This emergence is quite useful for sorts of applications which is developed in a mixture of both the kinds of token.

Note that the standards supported and embraced by MDC blockchain are not the actual smart contracts themselves, instead a set of rules/guidelines used to implement some set of functionalities. Hence, with the help of this blockchain network as a developer can feasibly create your own smart contracts adhering to some intentional standards.

MDC Coin Blockchain Products

Blockchain is a buzzword that is all over the current market, industries, businesses, and other domains making progress by releasing some really good use cases and product services. Such emphasis that makes dreams a reality for the common user is introduced named MDC Coin Blockchain Network. This network is a relatively new yet revolutionary type of blockchain network which has the capability of being a decentralized, transparent, scalable, and fast platform.

To overcome the drawbacks of Web2, the fundamentals of Web3 have been initiated to work for the outcomes with a better solution rate. Similarly, MDC Coin Blockchain Network has introduced a reliable and fast blockchain that overcomes the issues of the current system. This project assists a user with native payments through MDC assets particularly built for the entire ecosystem of MDC Coin Blockchain.

What is MDC Crypto Blockchain Network?

MDC Blockchain is a cutting-edge blockchain network that operates using the Geth software's Clique Proof of Authority (PoA) consensus algorithm. Designed to address the scalability, security, and decentralization challenges faced by traditional blockchain systems, MDC Blockchain leverages the power of PoA consensus to provide an efficient and reliable environment for decentralized applications (dApps) and smart contracts.

MDC COIN

MDC Coin is a revolutionary cryptocurrency built MDC blockchain technology. Designed to address the challenges of scalability, security, and decentralization, MDC Coin aims to become a cornerstone of the digital economy.

Mission

Our mission is to provide a seamless and efficient financial ecosystem that empowers individuals and businesses worldwide. Through cutting-edge technology and a user-centric approach, we strive to foster financial inclusion and revolutionize the way people transact and interact in the digital age.

Key Features

Scalability: MDC Coin's blockchain is built to handle a high throughput of transactions, ensuring fast and cost-effective transfers, even during peak usage.

Security: Utilizing state-of-the-art cryptographic protocols, MDC Coin prioritizes the utmost security of user data and transactions, safeguarding against potential threats and attacks.

Decentralization: Our network relies on a robust decentralized consensus mechanism, enhancing transparency and resilience by eliminating single points of failure.

Smart Contracts: MDC Coin supports smart contracts, empowering developers to create and deploy decentralized applications (DApps) with ease and efficiency.

Governance: As a truly decentralized ecosystem, MDC Coin incorporates a community-driven governance model, allowing token holders to actively participate in shaping the project's future.

Tokenomics

The MDC Coin's Tokenomics are designed to create a sustainable and equitable ecosystem.

- **Name: Meta Dollar Coin**

- **Ticker: MDC Coin**

- **Type : BEP 20**

- **Platform: BNB Blockchain**

- **Market Cap : 50,00,00,00,000 $**

- **Total Supply : 5,00,00,00,000 $**

- **Max Supply : 5,00,00,00,000 $**

- **Public Sale: 48%**

- **Private Sale: 16%**

- **Founder & Team: 10%**

- **Marketing & Partnership: 8%**

- **Future Growth: 4%**

- **Reward: 4%**

- **Partners: 5%**

- **Charity: 5%**

Road Map

One crucial concept to remember in understanding the roadmap's role is that it is a strategic document, and not a comprehensive account of all plan details.

September 2023	November 2023	December 2023	January 2024	February 2024
Idea	Market Research	Formation of founder steam Business plan	Start of Platform Development	Pre-Sale Launch Platform in beta test mode

December 2023	January 2024	February 2024	March 2024	March 2024
Formation of founder steam Business plan	Start of Platform Development	Pre-Sale Launch Platform in beta test mode	ICO Launch Identification Systems	Launch the Platform in Full mode
